Dear PG&E Hiring Team,

I am applying for the Operations Data Analyst, Reliability Strategy role (Req 172358). PG&E has been a reliable and trusted company for over a century. As a Concord, California resident, born and raised in the Bay Area, I have always had the utmost respect for and faith in the company as my primary gas and electric provider. Now, as a working professional, I strive to maintain the same reliability and trustworthiness in my work with data.

I have been working with data since I was very young, building charts and dashboards in Microsoft Excel before I reached middle school. In the years since, through coursework and real, hands-on projects, I have developed the skills, both soft and technical, needed to demonstrate dependability and honesty in my work. At UCLA, I studied linear models, data mining, and Monte Carlo methods, learning best practices for handling and interpreting data. As an independent consultant at Minthril, I support a large manufacturing company by analyzing and processing their production data, streamlining their processes, and clearly communicating my solutions and results.

Your posting describes building automated pipelines, validating data, and turning it into clear reports for engineering and operations teams. That is the work I enjoy most, and I would welcome the chance to bring it to the Reliability Strategy team. Thank you for your time and consideration.

Sincerely,
Elijah Ang
