Dear HSAG Hiring Team,

I am applying for the Analyst I position in the Data Science & Advanced Analytics division. I recently graduated from UCLA with a B.S. in Statistics & Data Science (3.6 GPA), and I am excited to apply my quantitative training to analysis that supports health services work.

Preparing reliable, analysis-ready data is work I already do. At Data Detectives, I built automated Python pipelines to ingest, clean, and validate housing data from multiple sources, then trained and evaluated a random forest model on the results. My coursework gives me the statistical grounding behind that work: Linear Models for regression theory and inference, Design and Analysis of Experiments for study design, ANOVA, and power and sample size, and Statistical Models and Data Mining for logistic regression and bootstrapping.

I write statistical code in Python, R, and SQL, and I use Excel and Word regularly. I also built interactive Tableau dashboards that turn several years of City of Berkeley budget data into something a general audience can browse and compare, which taught me to present results clearly to non-technical readers. My remote roles taught me to manage my own deadlines, ask clarifying questions early, and work well with colleagues at a distance.

Thank you for your consideration. I would welcome the chance to discuss how I can contribute to your team.

Sincerely,
Elijah Ang
