Dear PG&E Hiring Team,

I am applying for the Operations Data Analyst, Reliability Strategy role (Req 172358). I recently graduated from UCLA with a B.S. in Statistics & Data Science (3.6 GPA), and I would like to bring my data pipeline and analytics skills to PG&E's electric reliability strategy.

Your posting centers on timely, accurate data and automated processes for extraction, transformation, validation, and reporting. That is work I have already done. At Data Detectives, I built automated Python pipelines that extracted, cleaned, validated, and transformed housing data from multiple sources into reliable datasets, then trained a random forest model on the results. My coursework in Linear Models, Design and Analysis of Experiments, and Statistical Models and Data Mining gives me the statistical grounding to turn data into insight that supports decisions.

I am proficient in Python, SQL, R, and Excel, and I built interactive Tableau dashboards that let a general audience browse and compare several years of City of Berkeley budget data. In my remote roles I partnered directly with a founder to scope, build, and ship work on tight timelines, which prepares me to manage tasks from intake through delivery and to communicate clearly with technical and non-technical colleagues.

Thank you for your consideration. I would welcome the chance to discuss how I can contribute to your team.

Sincerely,
Elijah Ang
