Dear Pearson Hiring Team,

I am applying for the Advanced Associate, Measurement role (Req 26228). I recently graduated from UCLA with a B.S. in Statistics & Data Science, and I am excited by the chance to support large-scale assessment programs with careful, well-documented data analysis.

Your posting emphasizes judging whether data is suited to an analysis and whether the results are accurate and usable. That is the heart of my work at Data Detectives, where I built Python pipelines to ingest, clean, and validate housing data, then trained and evaluated a random forest model on it. Coursework in Linear Models, Monte Carlo Methods, and Causality, along with passing SOA Exams P and FM, gave me a strong quantitative foundation. I have not yet done formal item or test analysis, but I am comfortable with the statistics it builds on and eager to learn psychometric practice from your team.

I work in Python, R, and SQL, keep my projects under version control on GitHub, and am comfortable in Excel, Word, and Copilot. Remote roles at Data Detectives and Awe & Reverence taught me to scope work directly with colleagues, communicate clearly without being in the same room, and deliver on tight timelines.

Thank you for your consideration. I would welcome the chance to talk about how I can contribute.

Sincerely,
Elijah Ang
