Dear Pearson Hiring Team,

I am applying for the Advanced Associate, Measurement role (Req 26228). I recently graduated from UCLA with a B.S. in Statistics & Data Science (3.6 GPA), and I am excited by the chance to bring strong quantitative and programming skills to large-scale assessment programs.

Your posting emphasizes judging whether data is suited to an analysis and whether the results are accurate and usable. That is the heart of my work at Data Detectives, where I built automated Python pipelines to ingest, clean, and validate housing data, then trained and evaluated a random forest model on it. My coursework in Linear Models, Monte Carlo Methods, and Causality, together with passing SOA Exams P and FM, gives me a rigorous foundation in probability and statistical reasoning.

I am fluent in Python, R, and SQL, and I build and maintain projects on GitHub, including a Python pipeline that processes 40 seasons of real NBA data and interactive Tableau dashboards that make several years of municipal budget data easy to explore. My remote roles at Data Detectives and Awe & Reverence taught me to scope work directly with colleagues, communicate clearly from a distance, and deliver on tight timelines. I also use Excel, Word, and Copilot daily and enjoy finding AI-assisted ways to work more efficiently.

Thank you for your consideration. I would welcome the chance to talk about how I can contribute to your team.

Sincerely,
Elijah Ang
