Dear Hiring Team,

I am applying for the FastLane Associate, Data Quality Analyst role on the Customer Success team. I recently graduated from UCLA with a B.S. in Statistics & Data Science (3.6 GPA), and I am excited by the chance to own data quality for the customers who rely on Fortress's C-SCRM platform.

As an independent consultant at Minthril, I provide supply chain consulting to a large manufacturing company, working directly with the client to assess the risk of delays and build alert systems. I also streamlined their production plans with Excel pivot tables, VBA macros, and dashboards, cutting processing time by 90%. Explaining my solutions and results clearly to the client is a core part of that work.

Validating and standardizing data from multiple sources is what I did as a Data Analytics Intern at Data Detectives, where I built automated Python pipelines to ingest, clean, and validate housing data before modeling. I am comfortable in Excel, SQL, and Python, and I have built interactive Tableau dashboards that make municipal budget data easy for non-technical audiences to explore. I also use AI tools such as Copilot regularly and review their output carefully, and I learn new tools quickly.

Thank you for your consideration. I would welcome the chance to talk about how I can contribute to your team.

Sincerely,
Elijah Ang
